▼ Onboarding Funnel

Track user progression from app install to account activation and identify drop-off points

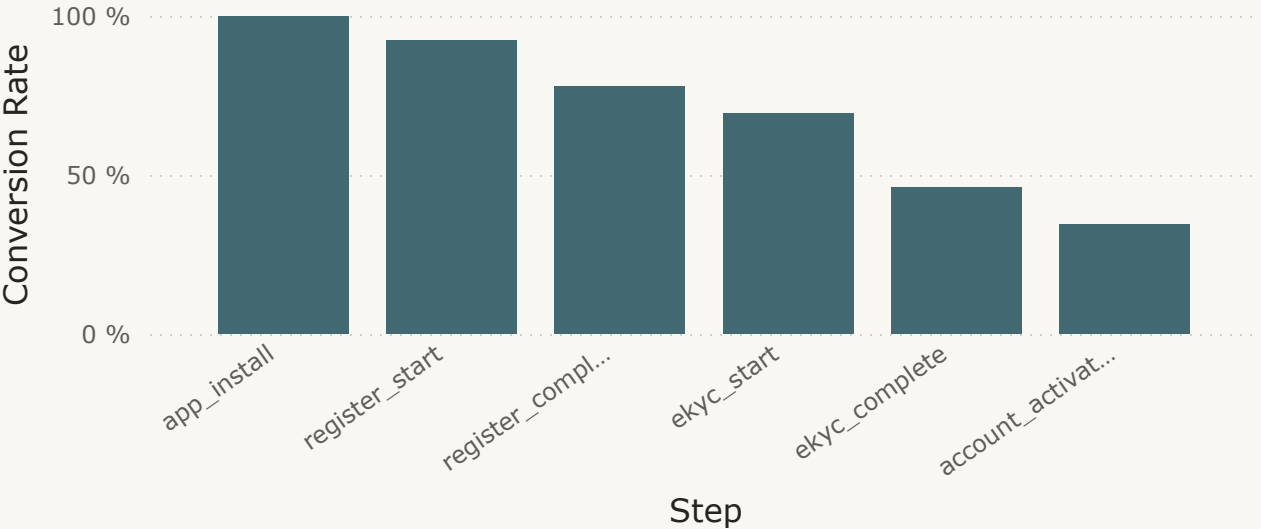

Funnel Users by Step

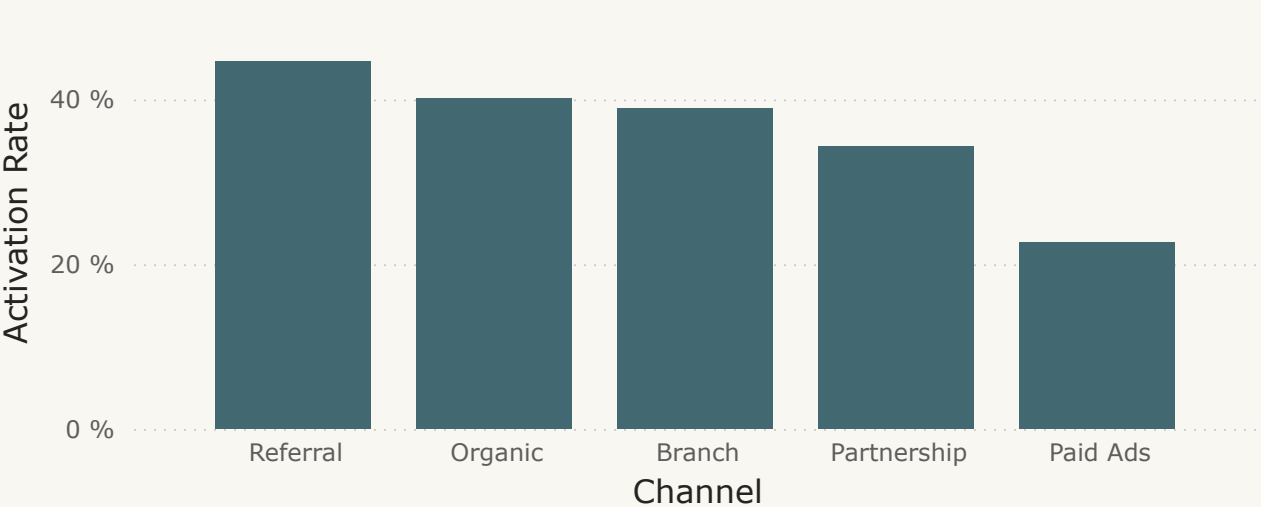

Key Insight

- The largest drop-off occurs around eKYC completion. Only 46.0% of installed users complete eKYC, and 34.5% reach account activation.
- Referral and Organic channels deliver stronger activation quality than Paid Ads.

Conversion from Install by Step

Activation Rate by Channel

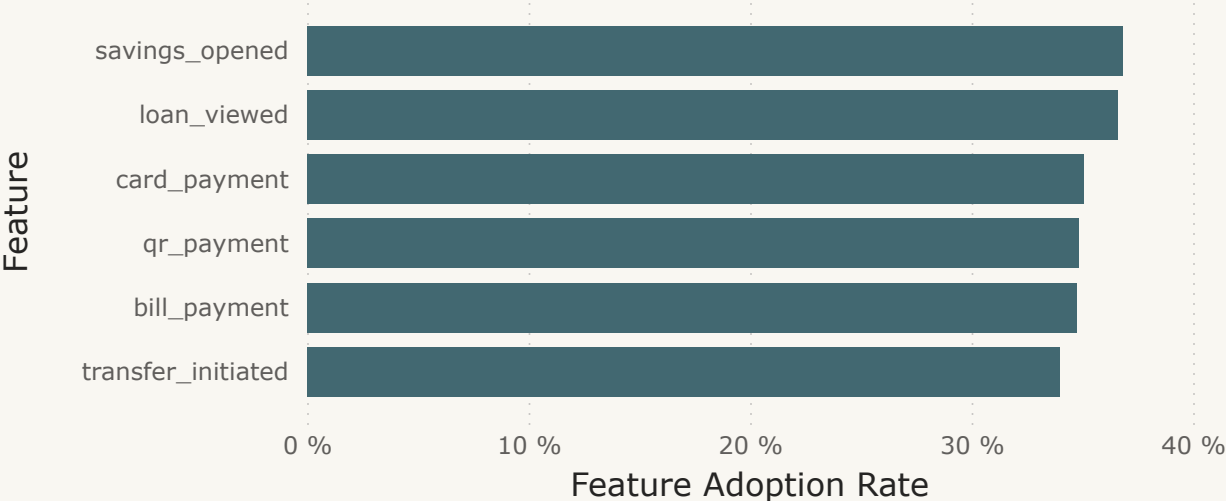

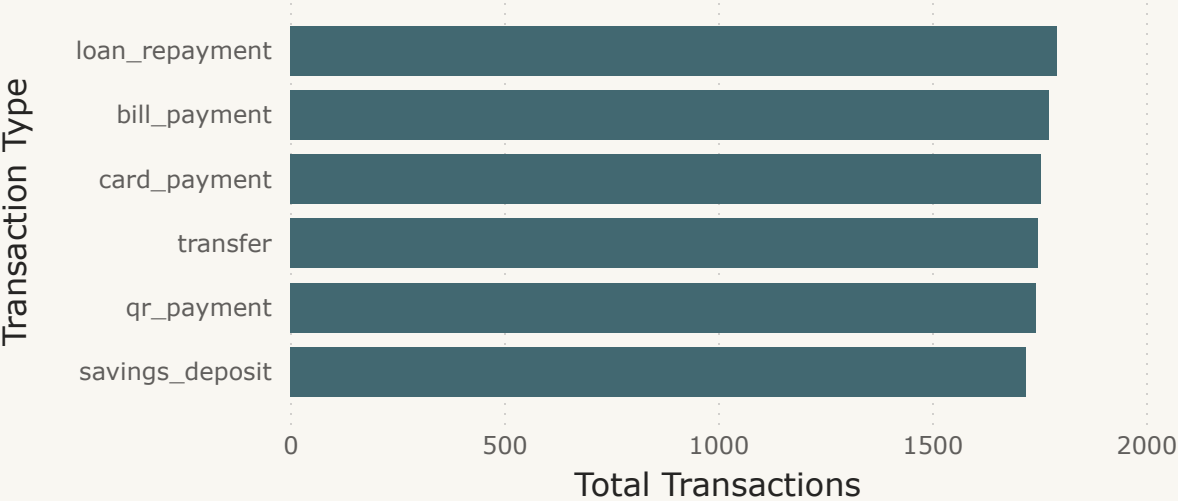

Feature Adoption & Transactions

Analyze product feature usage, transaction volume, and transaction value by type

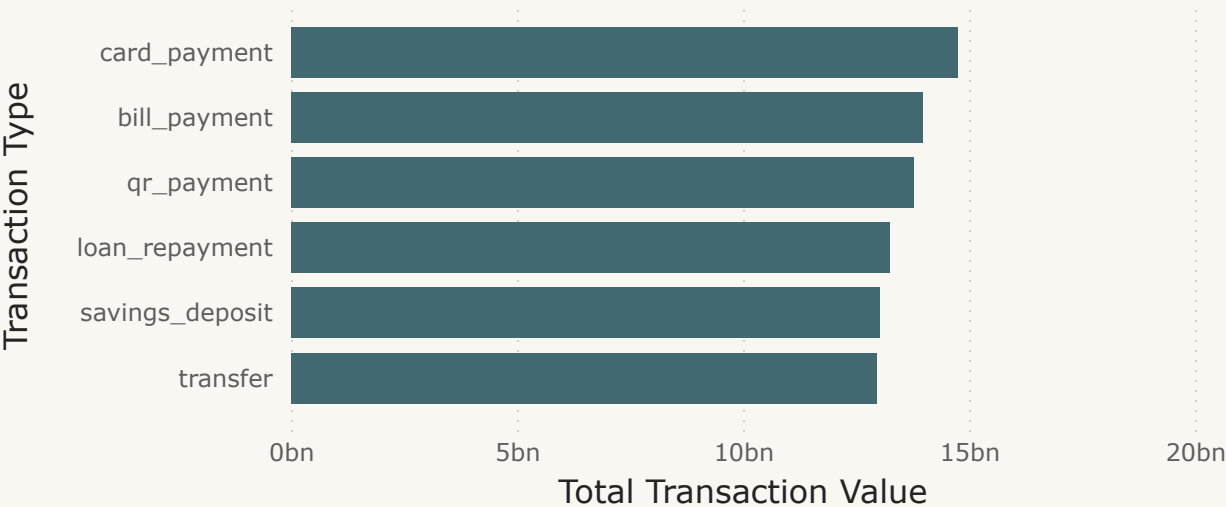

Feature Adoption Rate by Feature

Transaction Volume by Type

Transaction Value by Type

Key Insight

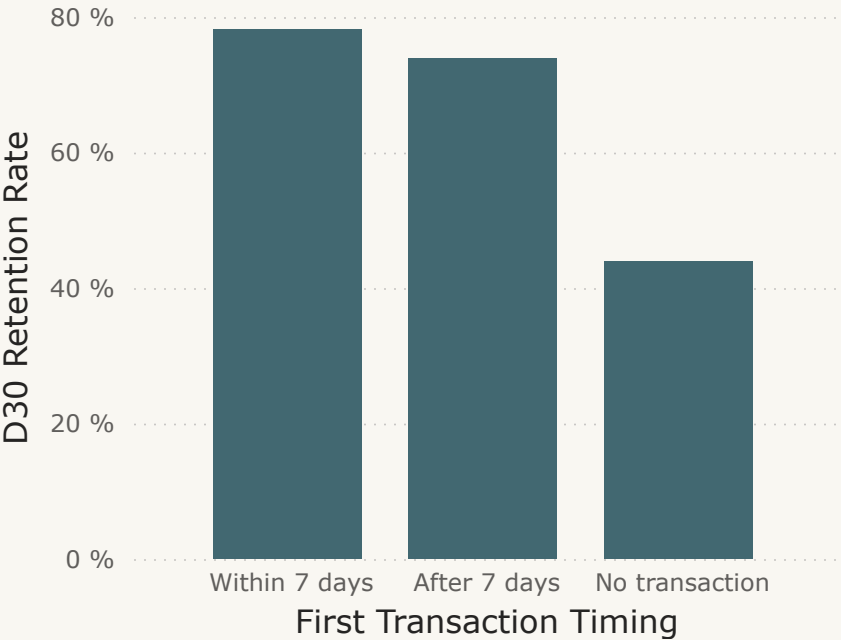

- Feature adoption is relatively balanced across core product features, with savings and loan-related actions slightly higher.
- Transaction volume is spread across payment, transfer, deposit, and repayment activities, suggesting diverse app usage beyond basic onboarding.

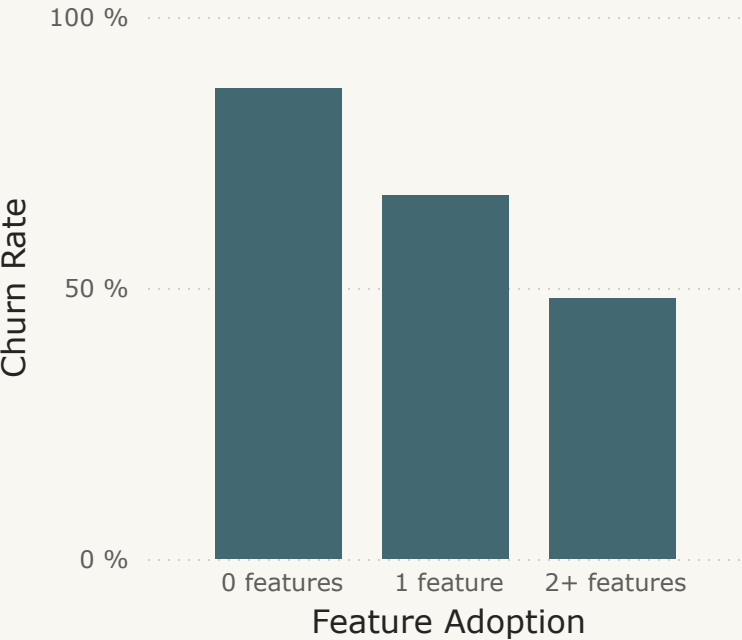

Retention & Churn Risk

Identify behavioral signals associated with retention, churn risk, and CRM actions

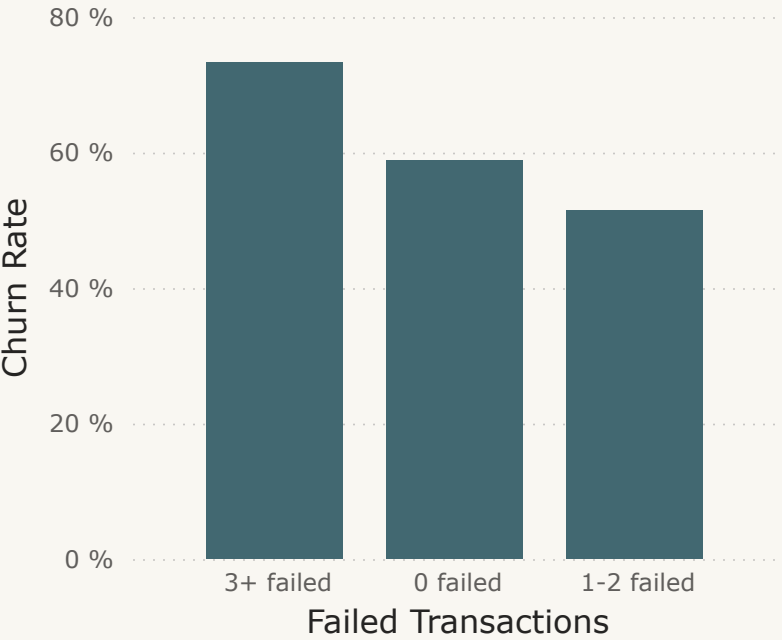

D30 Retention by First Transaction Timing

Churn Rate by Feature Adoption

Churn Rate by Failed Transaction Bucket

CRM Actions

Segment	Signal	Recommended Action
Friction Risk	3+ failed transactions	Proactive support outreach
No Transaction	Activated but no successful transaction	First transfer incentive
Not Activated	No account activation	eKYC reminder + support
Single Feature User	Only one feature adopted	Cross-sell bill payment / savings
High-Intent User	Uses bill payment or savings	Loyalty / referral campaign

Key Insight

- Activated users with no transaction have much lower D30 retention than users who transact within 7 days.
- Churn risk decreases as users adopt more features.
- Users with 3+ failed transactions show elevated churn risk and should receive proactive support.
